

September 30 is the last day to register a forage yield-loss claim without penalty or request an Extension of Insurance.

- 1 Numerical order of your current land as recorded at SCIC.
- 2 Rural municipality and legal land description where land is located.
- 3 The forage type seeded.
- 4 Land use. For tame hay, the field number and the year the forage was seeded are indicated.
- 5 The total acres seeded to the crop on land listed.
- 6 Cut number: 1, 2 or "T" for total production. Report the first and second cuts individually or a "T" for total.
- 7 Indicate the bale type: round or square.
- 8 Indicate the total number of bales for the cut or field.
- 9 List the estimated bale weight in pounds.
- 10 Forage crop and production guarantee, coverage based on long-term individual yield and coverage option selected.
- 11 If you have selected the Volunteer Forage Yields box on the Seeded Acreage Report, you will have a separate section to report yields for uninsured acres.
- 12 Indicate if you would like a claim registered.
- 13 This message will only appear if you reported uninsured tame hay acres on your Seeded Acreage Reports. Please contact SCIC directly to report production.
- 14 Customer signature and date completed.

For more information, additional forms or assistance in completing these forms, contact your local SCIC office or visit [scic.ca](http://scic.ca).

You made the most out of your land, now make the most of your time. File your Production Declaration the quick and easy way online with CropConnect.

CropConnect helps producers conduct more of their SCIC business online from a home computer or mobile device and reduce or eliminate paperwork. Log-in anytime or call your local SCIC office to activate your account.

With the mobile tool, you can report the following on your Production Declaration:

- Production by land or crop
- Fertilizer and fungicide use
- Crop varieties
- Seeding dates
- File a post-harvest claim

All appraisals (including wildlife) will be added to declared production for your individual yield calculations.

**22** Customer Signature \_\_\_\_\_ Date \_\_\_\_\_

**Note:**

- Production information must be submitted before a claim can be registered and **should be filed as soon as you complete harvest**.
- SCIC relies on customer's accurate production information to process claims and issue payments. **Please provide as much information as possible (accounting for weight and dockage) by completing all sections of the form.** Information is used to strengthen insurance programs, and producers that provide comprehensive information, such as the crop variety seeded and total acres seeded, will receive a personalized summary of agronomic information for their farm.

- Please include the grade for each legal land description. If the grade of your harvested production is below the standard grade, you may be eligible for a claim.

**November 15 is the last day to register a claim without penalty or request an Extension of Insurance for unharvested acres. Report your production as soon you complete harvest.**

- Numerical order of your current land as recorded by SCIC.
- Indicates the acres as summerfallow (SMF), stubble (STB) or irrigated (IRR).
- Indicates the crop variety seeded.
- Specifies the date the crop was finished seeding.

- If the crop variety was not entered on the Seeded Acreage Report, "unknown" will be listed. TO CHANGE, cross out "unknown" and write the crop variety.
- List fertilizer use of each nutrient (actual lb/acre): nitrogen (N), phosphorus (P), potash (K), sulphur (S).
- List the herbicide used.
- List the number of herbicide applications.
- List the fungicide and/or insecticide used. Please write additional information underneath if more space is required.
- List the number of fungicide/insecticide applications.

- Indicates the total acres seeded to the crop on land listed.
- List the net yield per acre adjusted for dockage and test weight. Include all production, whether it was sold, fed or in storage. Refer to the example of calculating dockage and test weight below. Please contact SCIC for more information.

**Net Yield/Acre Calculation Example**

You harvest hard red spring wheat (HRSW) with a yield of 24 bushels per acre with two per cent dockage and a test weight of 62 lb per bushel.

**Standard Weight Calculation**

|                                  |                                             |
|----------------------------------|---------------------------------------------|
| Harvested Yield                  | 24 bu/ac                                    |
| Actual Harvested Test Weight     | 62 lb/bu                                    |
| Standard Weight                  | 60 lb/bu                                    |
| Standard Weight Yield Conversion | 24 bu/ac (62 lb/bu ÷ 60 lb/bu) = 24.8 bu/ac |

**Dockage Calculation**

|                              |                                     |
|------------------------------|-------------------------------------|
| Yield after adjusting weight | 24.8 bu/ac                          |
| Dockage                      | 2%                                  |
| Dockage Calculation          | 24.8 bu/ac × 2% = 0.5 bu/ac         |
|                              | 24.8 bu/ac – 0.5 bu/ac = 24.3 bu/ac |
| <b>Net Yield/Acre</b>        | <b>24.3 bu/ac</b>                   |

To help calculate harvested crop in your bin, try SCIC's online Bin Calculator located at [scic.ca/resources](http://scic.ca/resources).

- List the unit of measure you are using (kg/bu/lb).
- Indicate the grade of harvested production.
- Fill in the total amount of net production.
- Indicates the insured or uninsured crop.
- Production guarantee for all acres of that crop if insured. If the crop is not insured, "n/a" is printed.
- Indicate if the crop is sold, fed or in storage.
- If the crop has suffered a loss, indicate the cause of loss.
- List the sum of the total net production by crop.
- Indicate if you would like a claim registered.
- Please ensure customer signature and date are completed.
